

ABSTRACT OF THE DISCLOSURE

The invention relates to a hinge system comprising one end (1) belonging to a first rigid element (7) and one end (3) belonging to a second rigid element (8), said ends having support surfaces which can be matched to one another. According to the invention, elastic means (18) are provided in order to maintain the pressure contact between the aforementioned surfaces. The inventive system also comprises at least one immaterial pivot point which can move in two orthogonal planes within the limits allowed by guide means (6) and means (19a-b) which only authorise pivoting in one plane or in a certain number of planes having a determined orientation.
